

Demo CRM system 2023

Presented by Customer Care Center
Sep, 2023

Left issues after 2nd demo

1/ Logic of system on user rights: **Fixed**

Link:

<https://docs.google.com/spreadsheets/d/1QPBI8XJ5pOej52DkxbCdpGbddWrZQnGnTuqNKi0bq5U/edit?usp=sharing>

2/ SLA? Who create? Who approve? How?

Fixed

3/ Why other departments can update “task status” of other departments?

Fixed

4/ In the case of CS staff needs to call back customers to complete a ticket

How we know he/she made it? → **Cloudgo will need time to fix it (6-7 days).**

Backup control:

- CS supervisor will check everyday
- IC will be the team check all ticket of CS end of month → Found mistakes → CS staff KPI will be impacted

Discussion points

1/ Process of receiving & handling customers tickets

1.1 Role of Customers Service Staff

1.2 Role of Related Departments

2/ Set-up SLA & Escalation scheme.

3/ Report

3.1 Auto report

3.2 Custom report

4/ Q&A

Some notes to remember

- (1) End users of system are CS staff & Staff of related departments → We prefer using Vietnamese as the main language of system
- (2) Most customers send issues = Vietnamese so sometime even system is setup = English but no auto translation for issue to English.
- (3) CRM system have 2 type of reports:

One is auto report means the reports are created by available data on the system → means some report is only conducted by Vietnamese

Second is customized reports (made by specific request of PHS, it will be both language, English and Vietnamese)

- (1) Because CRM is ready made product (provided by vendor) so there will be some default features & utilities that PHS may not use but still exist on system → During usage time, PHS staff can hide or expand to use, it depend but we will not mention in this session.

Process of receiving & handling tickets

Handling & Allocating tickets

Demo 1 (Done)

Customers send issues via multi channels

FACEBOOK

Receive and
Create ticket via
Chatbot

ZALO OA

Receive and
Create ticket via
on CRM Zalo
Chat box

TỔNG ĐÀI

Receive and
create ticket on
call pop-up

WEBFORM

Auto sync ticket
on CRM

EMAIL

Auto scan on
mail
support@phs.vn
and show on
CRM

INTERNAL

Create directly
on CRM

Demo 2: CS solve tickets itself

Note after 1st meeting for the demo 2

1/ CS staff has to do many steps before a ticket is created

→ Fixed

2/ Priority Level of ticket should not be chosen by staff

→ Fixed (Automation attached with ticket category)

3/ Additional demo: With the solving ticket by CS:

- CS staff can handle ticket within a call
- CS staff have to hang up & call back customer later

Demo 3.1 & 3.2:

CS has to transfer ticket to related departments

Demo 3.1:

CS has to transfer ticket to related departments (Sequent tasks)

Demo 3.2:

CS has to transfer ticket to related departments (Parallel tasks)

Note after 1st meeting for the demo 3.1 & 3.2

1/ The detailed assignment is quite complicated

→ Fixed: The system is now automatic tag related departments in a ticket.

→ 2 things that one related department have to do:

- (1) Update the status of the assigned task
- (2) Update the results for the the task completed.

2/ Show how related departments be noticed and show their tickets.

Other lefts → will be fixed next week

1/ Working screen (dashboard) of CS staff will show the ticket in the status of “OPEN”

2/ Working screen of the related department will show the tasks in the status of “PROCESSING”

*NOTE: Users have to use “Ticket Module” to solve ticket & see the detailed information.

Demo 4: Setup SLA [\(Link\)](#)

Logic of setting up an SLA.

Escalation notice

Case 1: SLA on time if every single tasks meet certain time → No escalation notification.

Case 2: SLA on time yet some single tasks are overdue →

Line manager of the related department will be noticed via email

Task owner also get the notification on CRM & via email

Case 3: SLA of a ticket is overdue

→ Ticket owner gets the notification on CRM & via email

→ CS manager will be noticed after 1 minute

→ BOM will be noticed after 72 hours

Demo 5: Report

Important notes

Rule to assign roles on CRM to ensure customer information

User type	Departments	Description
User admin	IT 1	Full of authority, including system configuration, customer's data import. No right to export data by any methods.
Admin	CS Manager & CS Supervisor	Full of authority & System configuration, excluding customer's data import, export, deletion.
Editor	CS staff IC	Check customer's information Edit & update customer's data. Allocate ticket to departments, leave comments on ticket and update ticket's status. Listen to call record on system.
Supporter	SS, BMD, IT, FN, ACC	View customer's information Leave comments on ticket and update ticket's status.
Viewer	BOM	View all of information on CRM system
